Mountain mapping and old toponymy of Maramures as pretext for field work with tourism geography students

Gabriela ILIES, Marin ILIES
Babes-Bolyai University
Extension of Sighetu Marmatiei

10th Mountain Cartography Workshop
Berchtesgaden 2016
Argument

• a cartography endeavor for non-cartography students, a pretext for rigorous field research, data retrieval and map design.

• Old land property documents speak about places that are hard to identify due to several errors

• The need for (some kind of) recording place-names at this scale
The maps

- Diploma work for students at Tourism Geography program
- Workflow

- Size: 70x50cm, 1:15000, aprox. 73km²
Usage

• Didactic approach: understanding the process of data retrieval, mapping and design principles, *hands-on*

• Image: *understanding place, discover,*

• Repairing errors: overlapping different place-name layers in order to fit old cadastral docs and maps in the contemporary framework (subsidies)

• Ethnographic approach: archive, regional phonetics and the stories behind the place-names
Covered Area

12 sheets with some requirements: at least one settlement and shaded relief
Mapping old toponymy data
Supplement toponymy data

Important place-names
Misspelled
Invented 😞
Thank you!
